
Tiwai Point Electricity

New Zealand's Aluminium Smelter at Tiwai Point produces the world's highest purity primary aluminium, contributing more than \$600 million annually in export income for New Zealand.

Tiwai Point is New Zealand's largest single user of electricity by a very large margin and is an integral part of the electricity market and system – employing 800 people directly with a flow-on employment profile of over three thousand jobs.

Greenwood Roche advises New Zealand's Aluminium Smelter and Pacific Aluminium on all aspects of the Tiwai Point Aluminium Smelter electricity supply, including the 2013 and 2015 renegotiations with Meridian Energy, and the restart of the fourth potline in 2018 and subsequent COVID-19 related shutdown in 2020.
