
Central Interceptor Tunnel Project

Greenwood Roche is assisting Watercare with this significant project designed to ensure there is sufficient capacity in Watercare's wastewater network to meet planned population growth and development in Auckland and prevent overflows into the waterways and harbours.

The Central Interceptor is a wastewater tunnel that will run between Western Springs and the Mangere Wastewater Treatment Plant. The tunnel will run underground for 13 kilometres and will be at a depth of between 22 and 110 metres. Along the route it will connect to Watercare's existing wastewater network, which will divert flows and overflows into the tunnel.

Hadleigh Yonge is leading Greenwood Roche's team which is advising Watercare on various aspects of this project, including providing strategic advice, negotiating and acquiring property rights, and advising on and dealing with issues relating to compensation.
