
Ocean Outfall Pipeline, Hokitika

Greenwood Roche has assisted Westland Dairy Company Limited with its \$26 million Ocean Outfall Pipeline project.

Our work involved drafting and negotiating land occupation and easement documentation with the Westland District Council for the deaeration chamber and the pipeline and drafting construction contracts for the two stage pipeline project. The pipeline and deaeration chamber due for completion in the first quarter of 2021 will convey treated wastewater from Westland Milk's Hokitika dairy factory, remove the air and discharge it into the ocean via an 800 metre underwater pipe. The company considers it is a more acceptable environmental solution and more sustainable system than the current system of discharge into the Hokitika River.
